50% of analytic projects fail.

– Gartner, 2015

Through 2022, only 20% of analytic insights will deliver business outcomes.

– Gartner, 2019

Data + Machine Learning = Profit...?

On September 21, 2009, the grand prize of **US\$1,000,000** was given to the BellKor's Pragmatic Chaos team which bested Netflix's own algorithm for predicting ratings by 10.06%.

“[T]he additional accuracy **gains** that we measured did not seem to justify the engineering **effort** needed to bring them into a production environment.”

Netflix Technology Blog

Learn more about how Netflix designs, builds, and operates our systems and engineering organizations

Apr 5, 2012

Analytic projects fail because...

...they aren't completed within **budget** or on **schedule**,
or because they fail to deliver the **features** and **benefits**
that are optimistically agreed on at their outset.

How to Avoid Failure?

- 1 Build with Organizational Buy-in
- 2 Build with End In Mind
- 3 Build with a Structured Approach

"The beginning of wisdom is
to call things by their proper
name."

– Confucius

The Blind Men and the Elephant

It was six men of Indostan
To learning much inclined,
Who went to see the Elephant
(Though all of them were blind),
That each by observation
Might satisfy his mind.

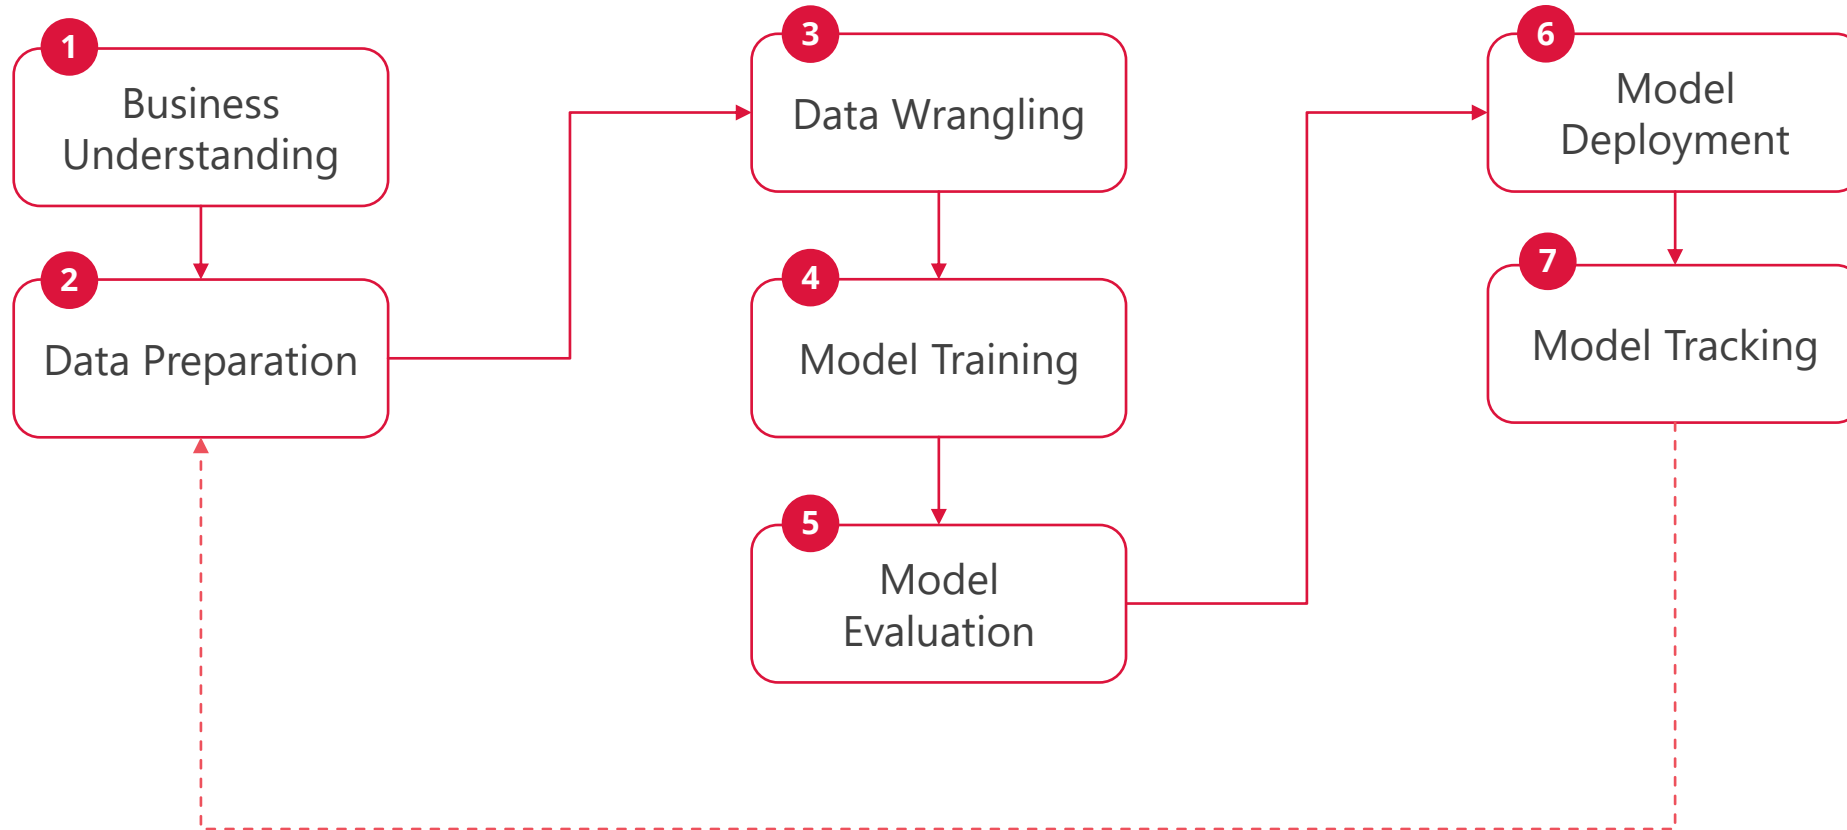

And so these men of Indostan
Disputed loud and long,
Each in his own opinion
Exceeding stiff and strong,
Though each was partly in the right
And all were in the wrong!

– John Godfrey Saxe

Far better
an **approximate** answer to the **right** question
than
an **exact** answer to the **wrong** question.

– John Tukey

1 DETERMINE

2 UNDERSTAND

3 MAP

What does the client want to achieve?

1 DETERMINE

Primary Objective

- Reduce attrition
- Customized targeting
- Plan future media spend
- Prevent fraud
- Recommend Products

2 UNDERSTAND

3 MAP

1

DETERMINE

2

UNDERSTAND

- Understand **success criteria**
 - Specific, measurable, time-bound
- List **assumptions, constraints, and important factors**
- Identify **secondary or competing objectives**
- Study **existing solutions** (if any)

3

MAP

1

DETERMINE

2

UNDERSTAND

Business Objective → Technical Objective

3

MAP

- State the **project objective(s) in technical terms**
- Describe how the data science project will **help solve the business problem**
- Explore **successful scenarios**

A problem well stated
is a problem half-solved.

– CF Kettering

1 DETERMINE

2 UNDERSTAND

3 MAP

OBJECTIVE →	TECHNIQUE →	EXAMPLES
Predict Values	Regression	Linear regression, Bayesian regression, Decision Trees
Predict Categories	Classification	Logistic regression, SVM, Decision Trees
Predict Preference	Recommender System	Collaborative / Content-based filtering
Discover groups	Clustering	<i>k</i> -means, Hierarchical clustering
Identify unusual data points	Anomaly Detection	<i>k</i> -NN, One-class SVM
...		

If all you have is a **hammer**
then everything looks like a **nail**.

- **Primary Objective:** Prevent attrition → Increase subscription renewals
- **Competing Objective:** High value customers are also targeted for up-sell
- **Constraints:** Avoid targeting customers too close to their contract expiration
- **Success Criteria:** Current renewal rate = 65% → Improve by 8%
- **Existing Solution:** Business-rule-based targeting
- **Data Science Objective:** Build a **binary classification model** to identify customers who are not likely to renew their subscriptions three months in advance of their contract expiration.
- **Success Scenario:** The model correctly identifies 80% of the future **attritors**, a promotional campaign targets all likely attritors, and successfully converts 19% of them into non-attritors.

Project Plan

- Duration
- Inventory of resources
- Tools and techniques
- Risks and contingencies
- Costs and benefits
- Milestones

The thought that disaster is impossible often leads to an unthinkable disaster.

– Gerald Weinberg

Titanic at Southampton docks, prior to departure

3

ASSESS

4

VECTORIZE

1 IDENTIFY

- **Data sources, formats**
 - Database, Streaming API's, Logs, Excel files, Websites, etc.
- **Entity Relationship Diagram (ERD)**
- Identify **additional data sources**
 - Demographics data appends,
 - Geographical data,
 - Census data, etc.
- Identify **relevant data**
- Record **unavailable data**
- How long a history is available, and how much of it should be used?

2 COLLECT

3 ASSESS

4 VECTORIZE

1 IDENTIFY

2 COLLECT

- Access or acquire all relevant data in a **central location**
- **Quality control checks and tests**
 - File formats, delimiters
 - Number of records, columns
 - Primary keys

3 ASSESS

4 VECTORIZE

1 IDENTIFY

First look at the data

- **Get familiar** with the data
- Study **seasonality**
 - Monthly/weekly/daily patterns
 - Unexplained gaps or spikes in the historical data
- Detect **mistakes**
 - Extreme or outlier values
 - Unusual values
 - Special missing values
- Check **assumptions**
- Review **distributions**

2 COLLECT

3 **ASSESS**

4 VECTORIZE

Tidy dataset are all alike;
Every messy dataset is messy in its own way.

- Hadley Wickham

There is no substitute for
getting to **know your data**.

– Witten and Frank

GOAL: Create the Analysis Dataset

1 IDENTIFY

2 COLLECT

3 ASSESS

4 **VECTORIZE**

$$y = \begin{pmatrix} y_1 \\ y_2 \\ y_3 \\ . \\ . \\ . \\ y_n \end{pmatrix}$$

Outcome
Target
Independent Variable

$$X = \begin{pmatrix} x_{11} & x_{12} & x_{13} & \dots & x_{1j} \\ x_{21} & x_{22} & x_{23} & \dots & x_{2j} \\ x_{31} & x_{32} & x_{33} & \dots & x_{3j} \\ . & . & . & & . \\ . & . & . & & . \\ . & . & . & & . \\ x_{n1} & x_{n2} & x_{n3} & \dots & x_{nj} \end{pmatrix}$$

Inputs
Features / Attributes
Dependent Variables

Target Definition

- **Churn = 90 days of consecutive inactivity** (for a pre-paid telecom customer)
- What's **inactivity**?
 - Incoming and outgoing calls
 - Data usage
 - Incoming text
 - Promotional texts
 - Voicemail usage
 - Call forwarding
 - Etc.
- Customers may **change their device** or phone number.
 - Churn at the individual (person) level, or at the device (phone) level?
- Customers may return (become active again) after 90 days of inactivity?
- Prediction window
 - Predict 90 days of consecutive inactivity?
 - Would 10 days of consecutive inactivity suffice?
 - How many customers return after x days of inactivity?
- Fraud, Involuntary churn
- ...

Accurate but not Precise

CHART TO HELP DETERMINE RISK OF BEAR ATTACK:

Modeling Sample

- **Historical trends and seasonality**
 - Are there certain timeframes that should be discarded?
 - The model should be generalizable
- **Eligible, relevant population**
 - Must align with the business goals
- **Eligible, relevant markets**
 - Must align with the business goals
 - E.g., within a certain drive-time distance
- **Outdated products or events**

Selection Bias

Abraham Wald's Work on Aircraft Survivability
Journal of the American Statistical Association Vol. 79, No. 386 (June, 1984)

Making Prediction about the Future

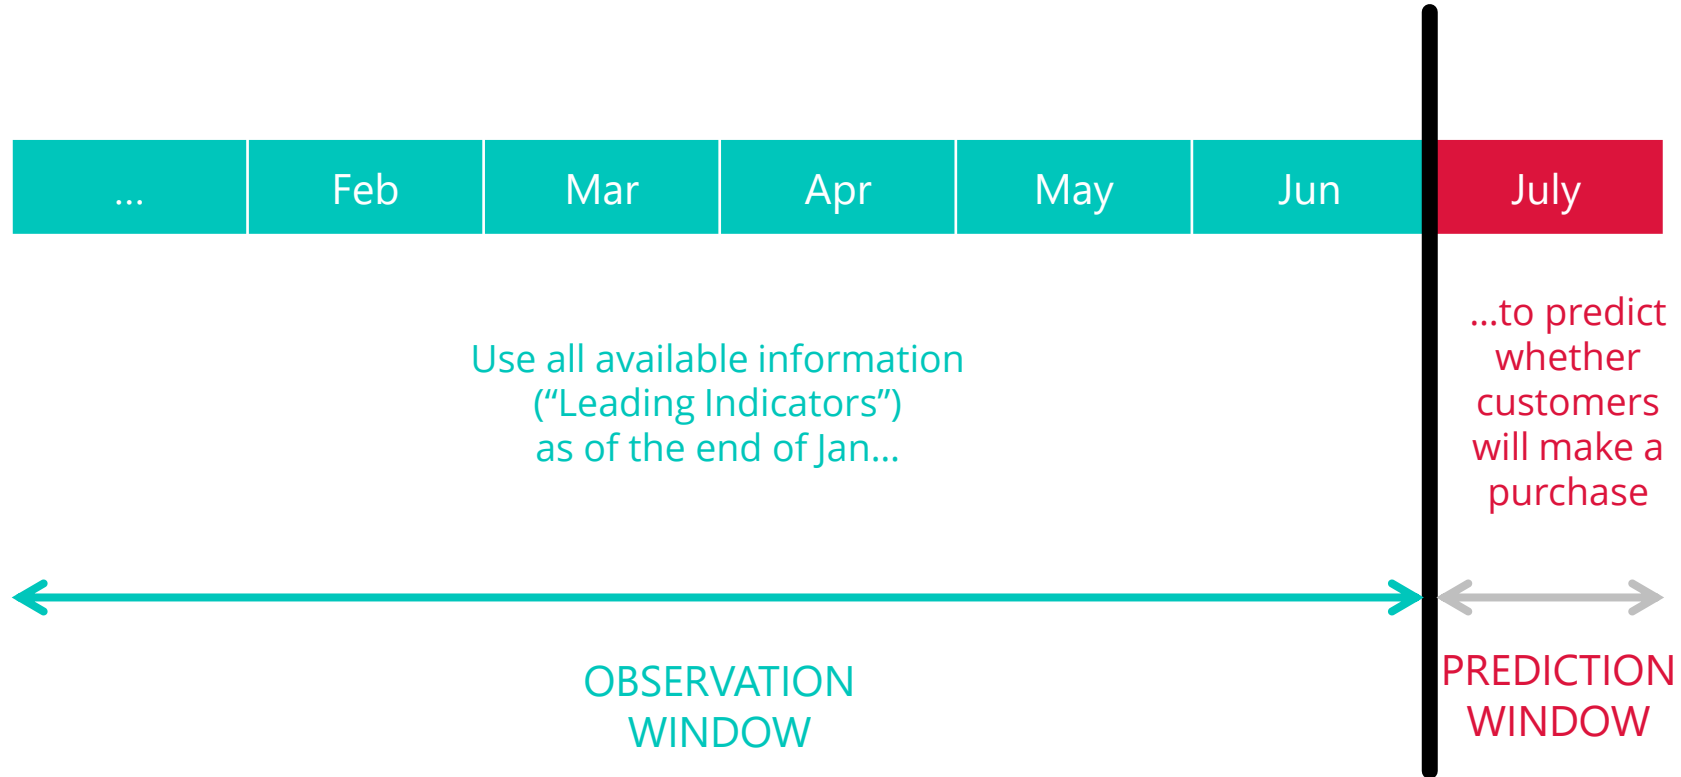

Dog or muffin?

vs.

**Who is likely
to churn?**

Information Leakage

- The leading indicators must be calculated from the timeframe *leading up to* the event – it must not overlap with the prediction window.
- Beware of proxy events, e.g., future bookings

Data Aggregation

- **Attribute creation**
 - Derived attributes: Household income / Number of adults = Income per adult
- **Brainstorm with team members** (both technical and non-technical)

$$X = \begin{pmatrix} x_{11} & x_{12} & x_{13} & \dots & x_{1j} \\ x_{21} & x_{22} & x_{23} & \dots & x_{2j} \\ x_{31} & x_{32} & x_{33} & \dots & x_{3j} \\ \cdot & \cdot & \cdot & & \cdot \\ \cdot & \cdot & \cdot & & \cdot \\ \cdot & \cdot & \cdot & & \cdot \\ x_{n1} & x_{n2} & x_{n3} & \dots & x_{nj} \end{pmatrix}$$

Derived Attributes

CUSTOMER ID	PURCHASE DATE

Give me **six** hours to chop down a tree
and I will spend the first **four** sharpening the axe.

— Abraham Lincoln (?)

- **Descriptive statistics**
 - Review with the client
- **Correlation analysis**
 - Review with the client
 - Watch out for data leakage
- **Missing value imputation**
- **Trim extreme values**
- **Process categorical attributes**
- **Transformations** (square, log, etc.)
 - Binning / variable smoothing
- **Multicollinearity**
 - Reduce redundancy
- **Additional feature** (derived variables)
- **Interactions**
- **Normalization** (scaling)

	Univariate	Multivariate
Non-Graphical	<ul style="list-style-type: none"> ○ Categorical: Tabulated frequencies ○ Quantitative: <ul style="list-style-type: none"> ○ Central tendency: mean, median, mode ○ Spread: Standard deviation, inter-quartile range ○ Skewness and kurtosis 	<ul style="list-style-type: none"> ○ Cross-tabulation ○ Univariate statistics by category ○ Correlation matrices
Graphical	<ul style="list-style-type: none"> ○ Histograms ○ Box plots, stem-and-leaf plots ○ Quantile-normal plots  <p>The graphical section for univariate data includes three plots. The first is a histogram showing a distribution of data with a peak around 0 and a long right tail. The second is a box plot showing the median, quartiles, and outliers of the same data. The third is a quantile-normal plot showing the data points following a normal distribution line, with a legend indicating 'line='45'', 'fit=True'.</p>	<ul style="list-style-type: none"> ○ Univariate graphs by category (e.g., side-by-side box-plots) ○ Scatterplots ○ Correlation matrix plots  <p>The graphical section for multivariate data includes three plots. The first is a side-by-side box plot comparing five categories. The second is a scatterplot showing the relationship between two variables, with data points colored by category. The third is a correlation matrix plot showing the relationships between multiple variables, with a color scale from -1.00 to 1.00.</p>

- **Feature Reduction:** The process of selecting a subset of features for use in model construction
 - Useful for both supervised and unsupervised learning problems

Art is the elimination of the unnecessary.

– Pablo Picasso

Feature Reduction: Why

- **True dimensionality <<< Observed dimensionality**
 - The abundance of redundant and irrelevant features
- **Curse of dimensionality**
 - With a fixed number of training samples, the predictive power reduces as the dimensionality increases. [Hughes phenomenon]
 - With d binary variables, the number of possible combinations is $O(2^d)$.
- **Goal of the Analysis**
 - Descriptive → Diagnostic → Predictive → Prescriptive

Hindsight

Insight

Foresight
- **Law of Parsimony** [Occam's Razor]
 - Other things being equal, simpler explanations are generally better than complex ones.
- **Overfitting**
- **Execution time** (Algorithm and data processing)

Feature Reduction Techniques

1. Percent missing values
2. Amount of variation
3. Pairwise correlation
4. Multicollinearity
5. Principal Component Analysis (PCA)
6. Cluster analysis
7. Correlation (with the target)
8. Forward selection
9. Backward elimination
10. Stepwise selection
11. LASSO
12. Tree-based selection

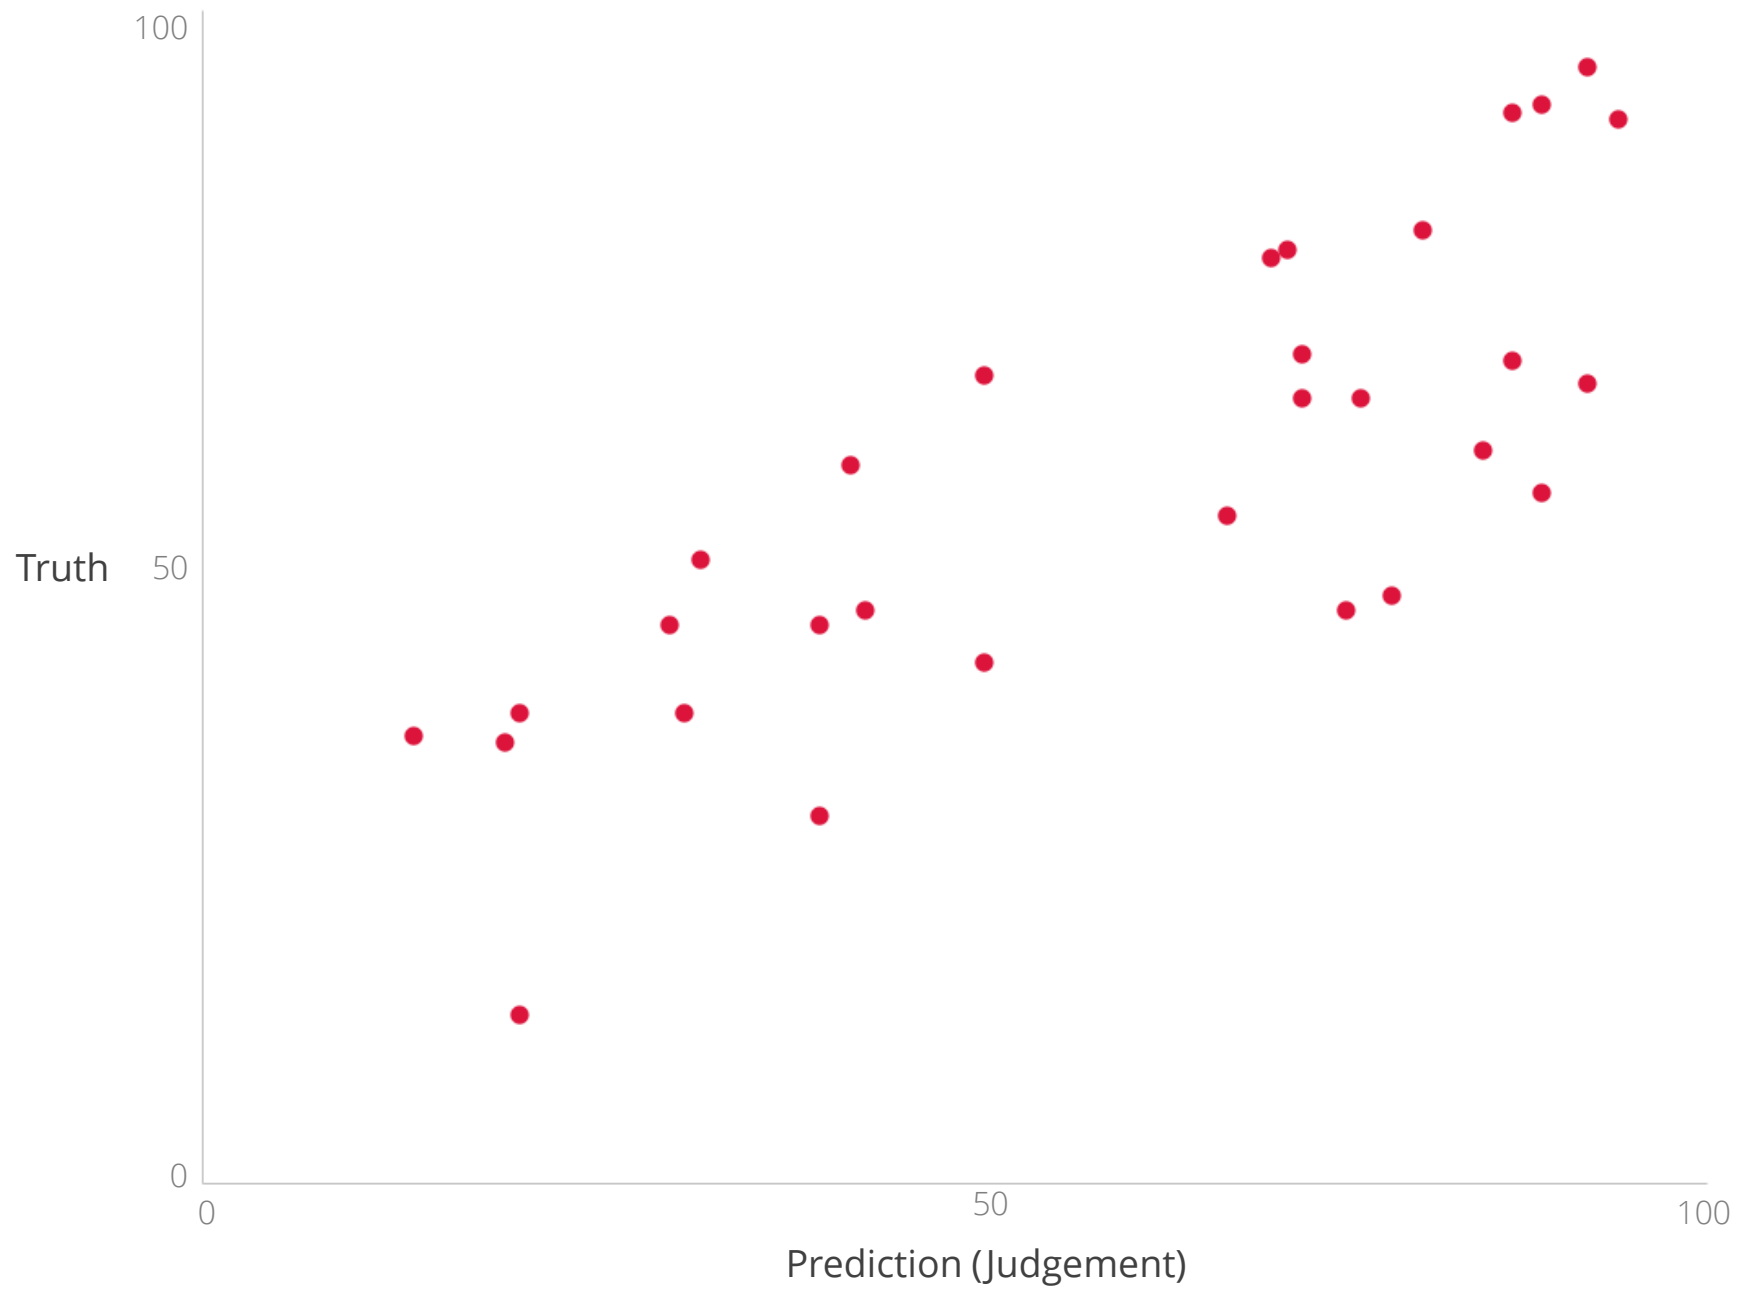

- Try **more than one machine learning technique**
- Fine-tune **parameters** and **hyper-parameters**
- Assess **model performance**
- Avoid **Over-fitting**

Assess Model Performance

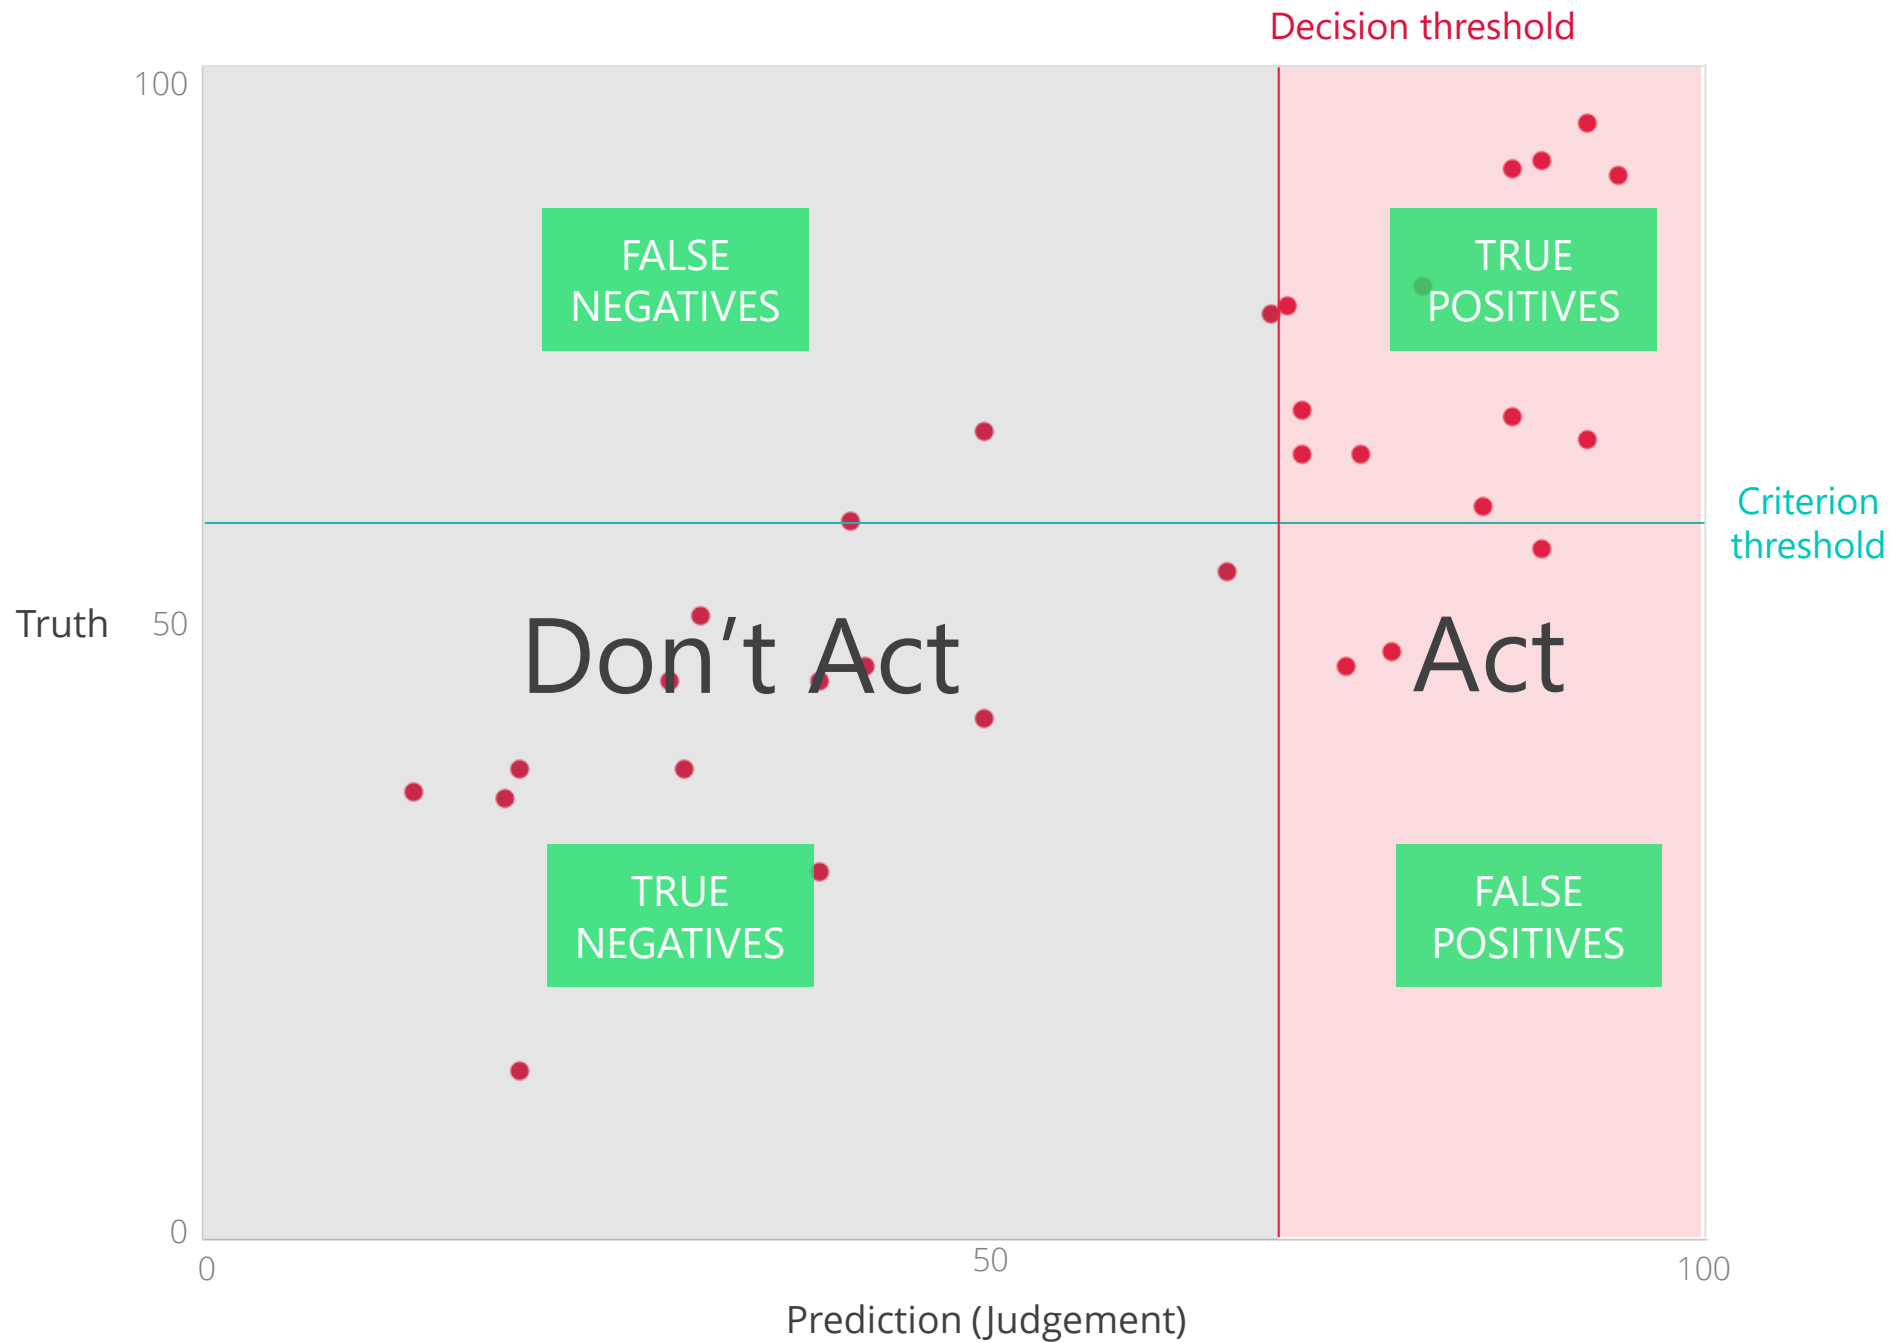

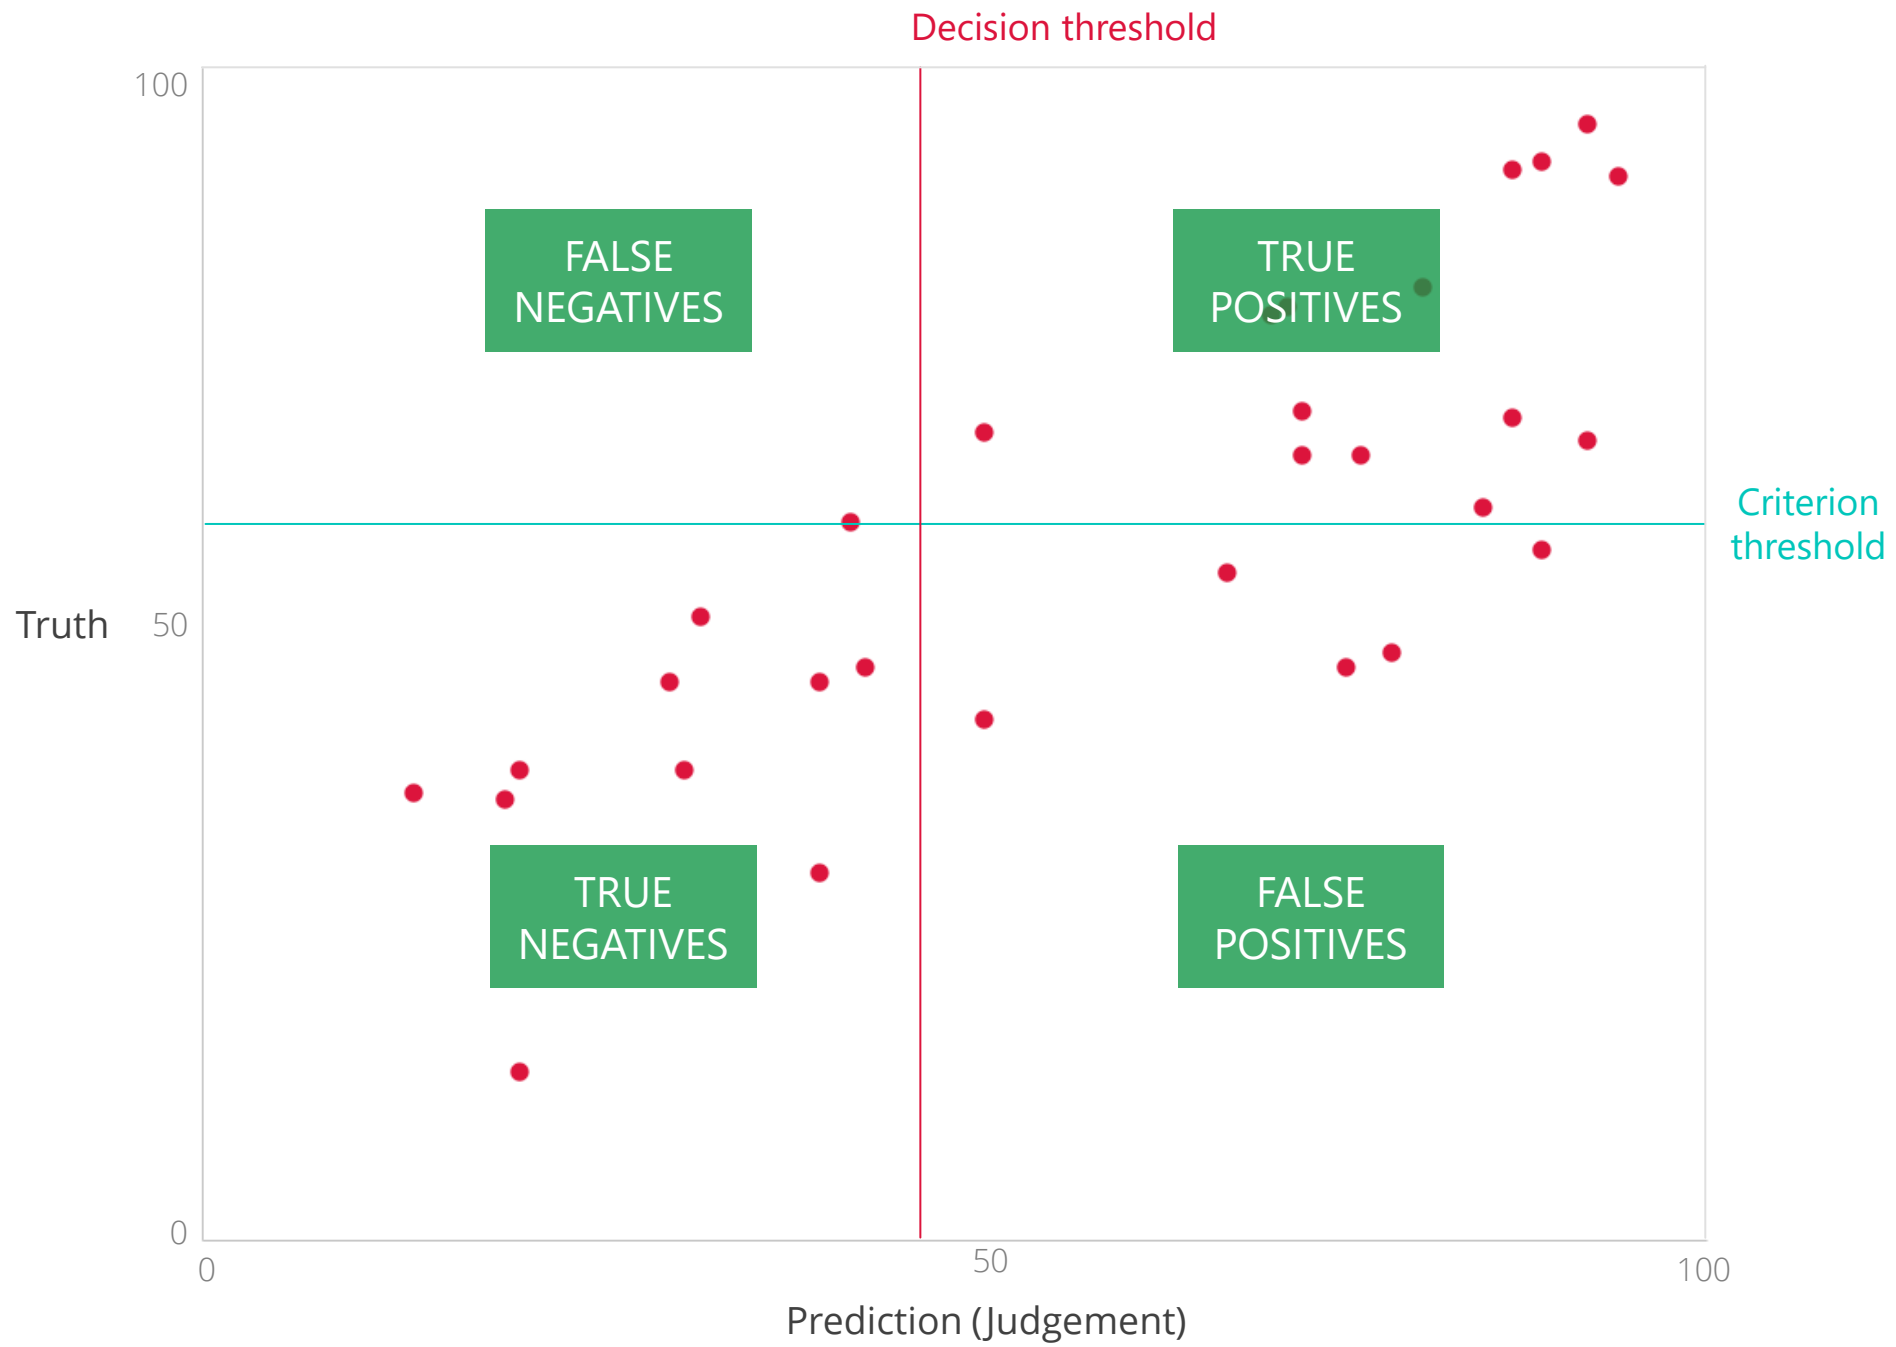

- Area Under the ROC Curve (AUC), Confusion Matrix, Precision, Recall, Log-loss
- Model Lift, Model Gains, Kolmogorov-Smirnov (KS), etc.

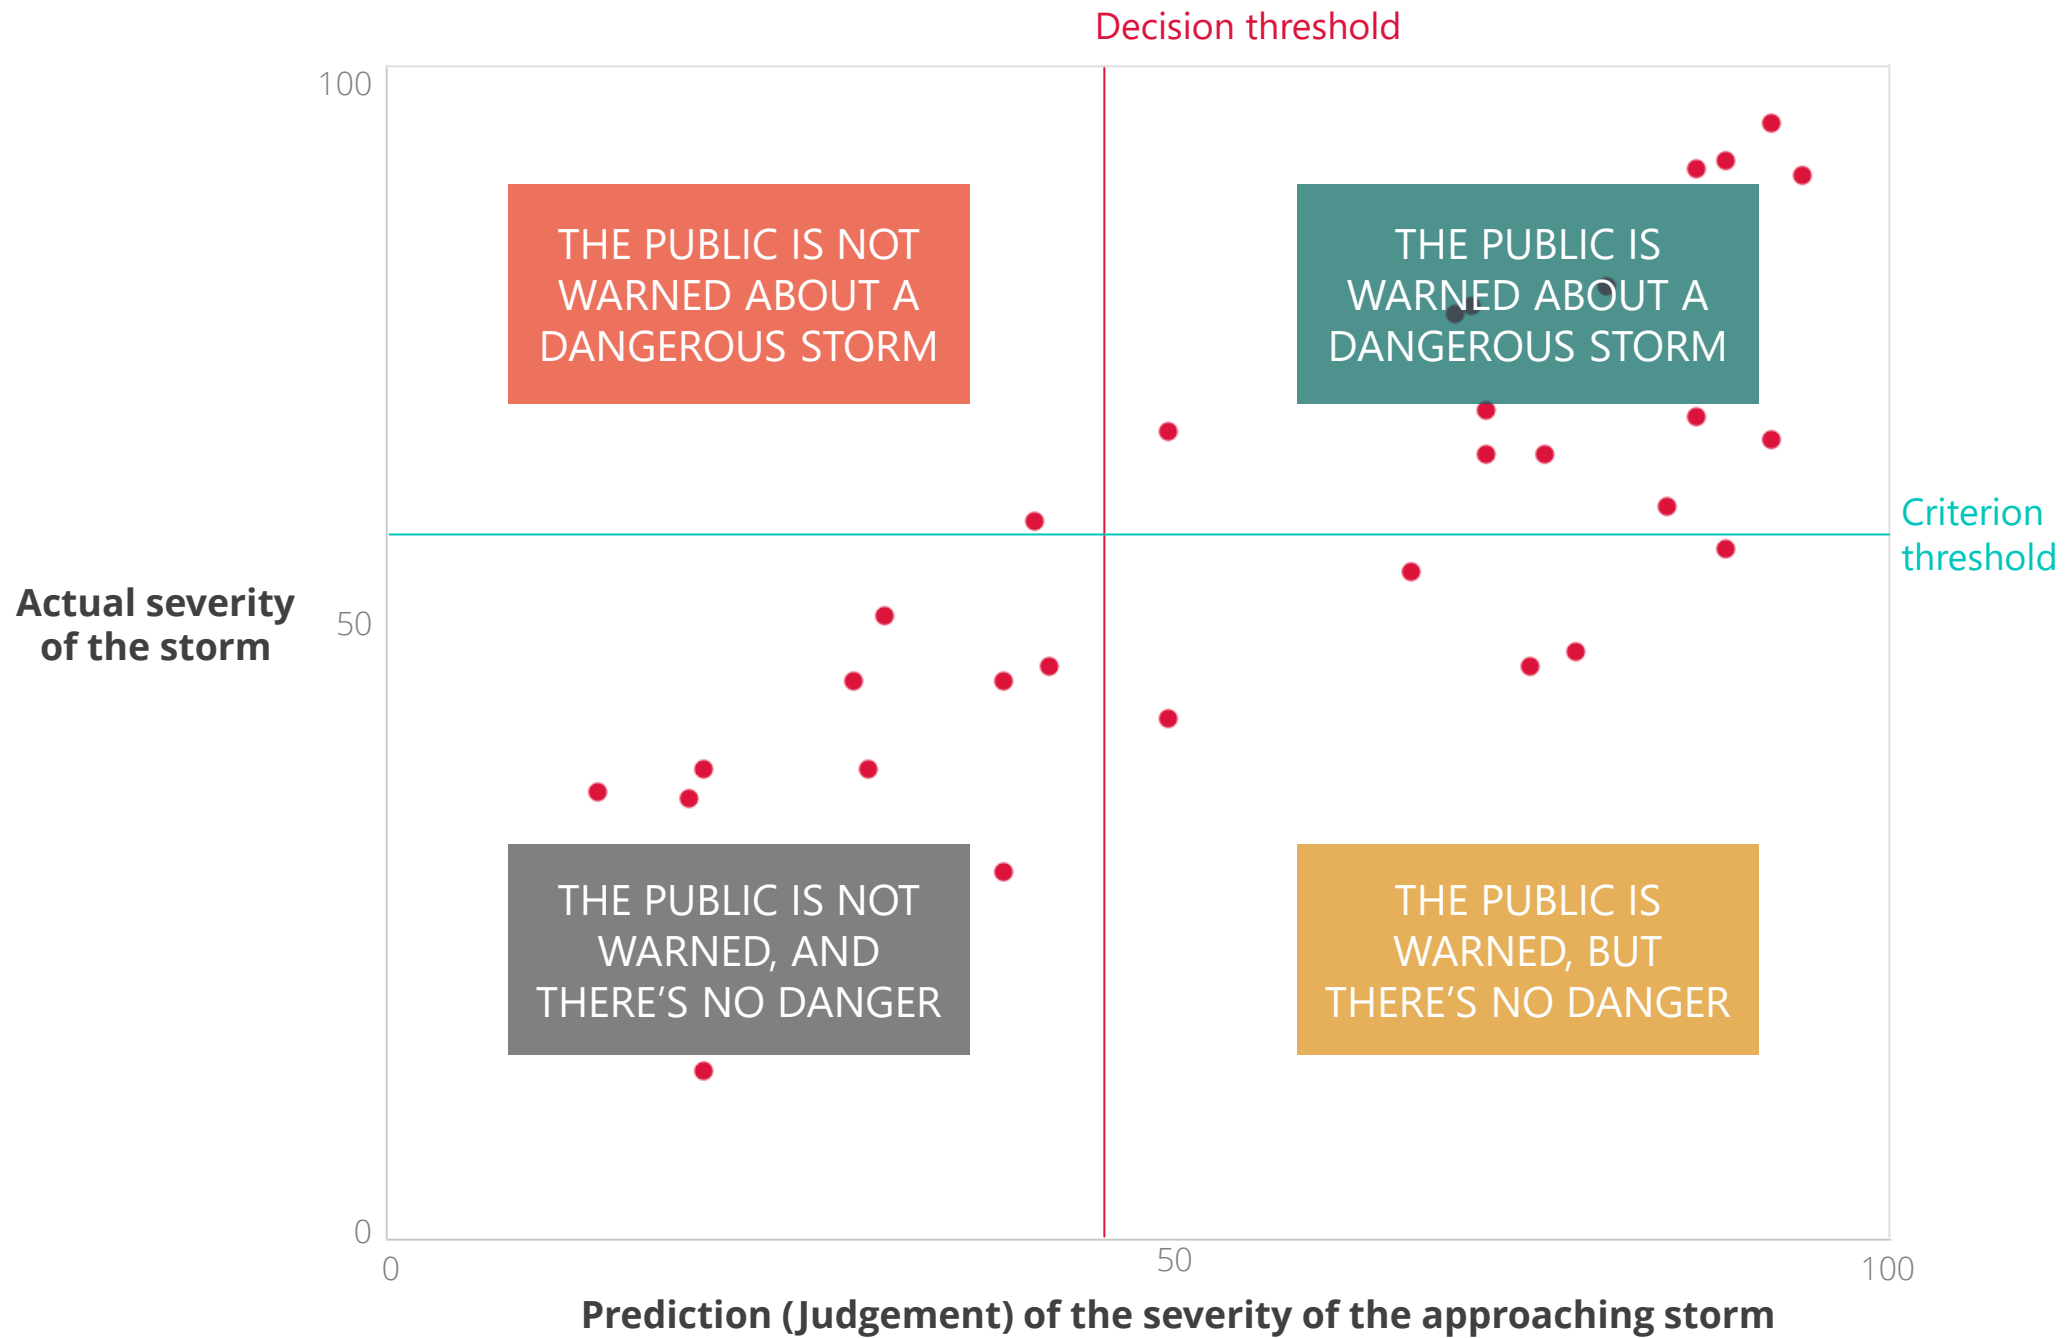

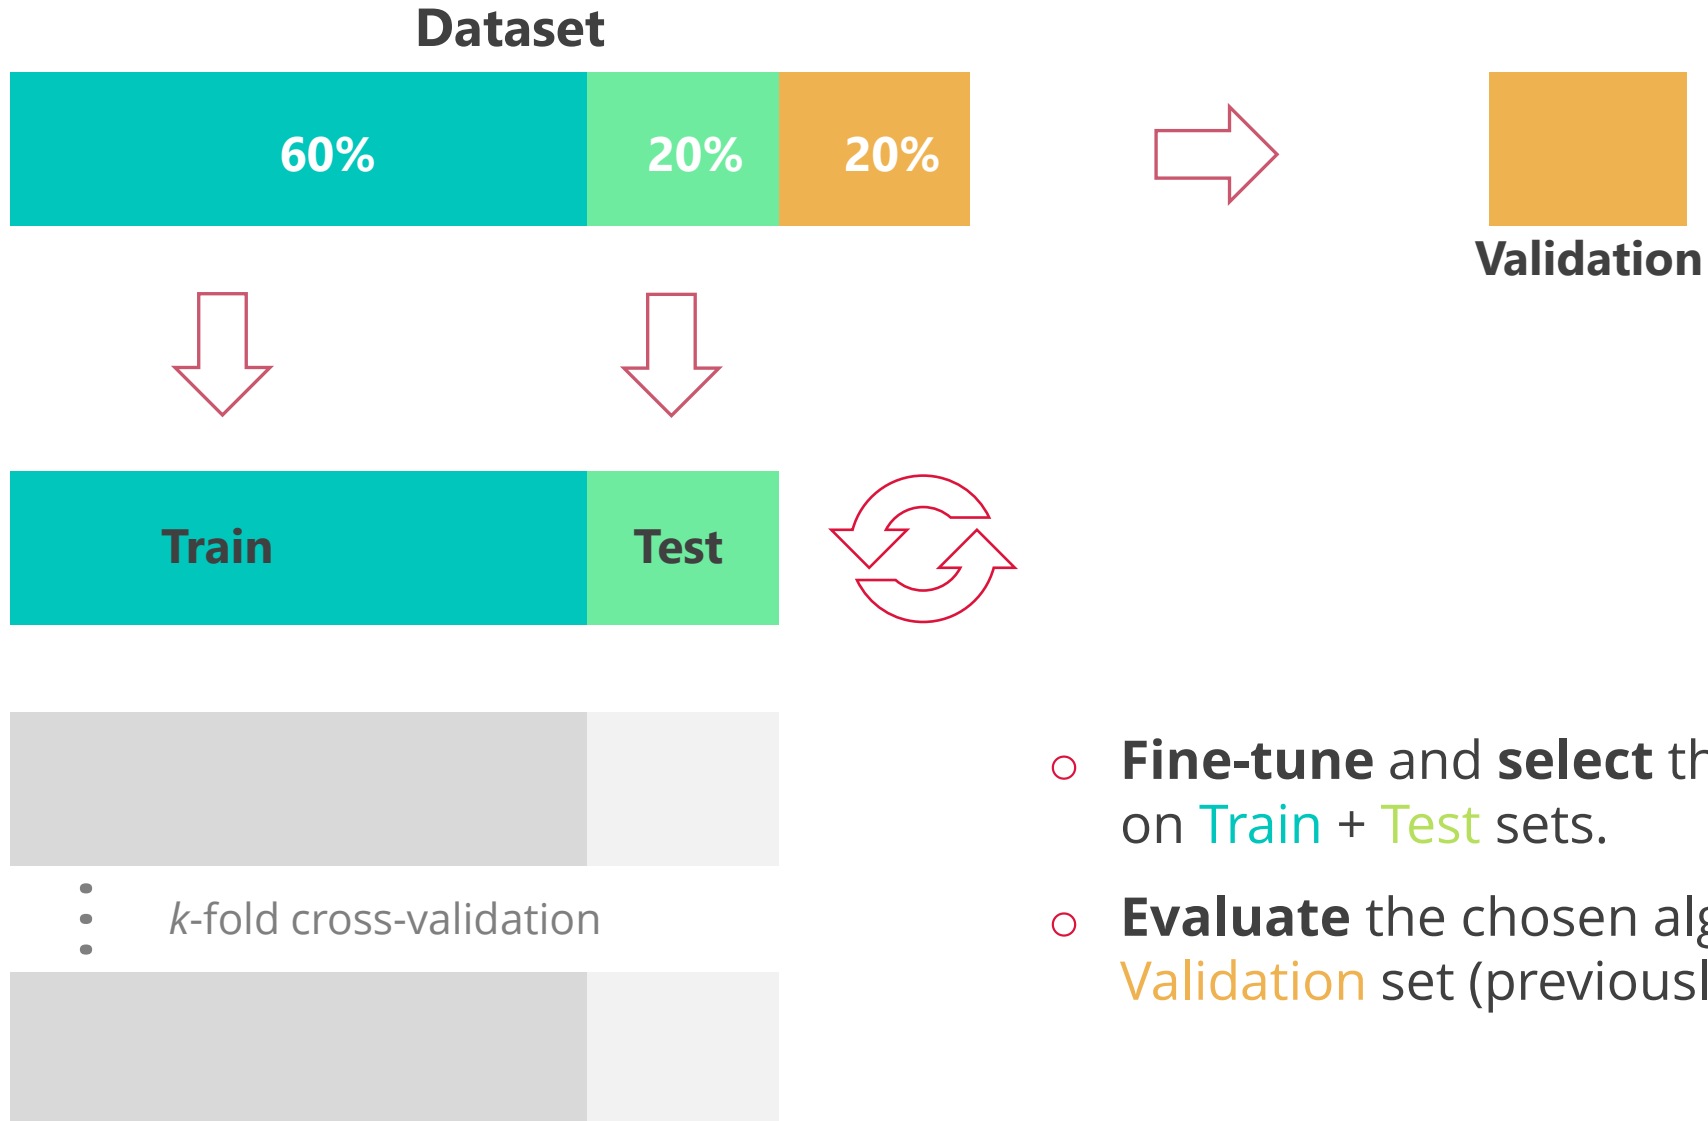

When a measure becomes a target,
it ceases to be a good measure.

Goodhart's law

Tri-fold Partition

- **Fine-tune** and **select** the best model based on **Train** + **Test** sets.
- **Evaluate** the chosen algorithm on the **Validation** set (previously unseen data).

Bias-Variance Tradeoff

With four parameters I can fit an elephant,
and with five I can make him wiggle his trunk.

– John von Neumann

Assignment #1 (Individual Assignment)

Due by 13-FEB-2024

1. From the following five aspects of a Data Science project, which one do you think is the most important? Please provide a rationale for your answer.
 - a. Understanding the business question,
 - b. Quality of data,
 - c. Statistical rigor and accuracy,
 - d. Using the correct tools/techniques, and
 - e. Communicating results back to stakeholders.
2. From the following aspects of Data Science, which one are you most interested in? Please elaborate your answer.
 - a. Business Requirements,
 - b. Exploratory Data analysis (EDA),
 - c. Feature Engineering and data pipelines,
 - d. Model Building,
 - e. Putting the model into production (automation),
 - f. Explain model results to non-technical audience,
 - g. Develop and implement strategies based on model results,
 - h. Other.

This is an individual assignment, but students are encouraged to discuss these items with each other.
